- ☐ Conclusion

INTRODUCTION

- With the rapid global growth in electronic commerce (e-commerce), businesses are attempting to gain a competitive advantage by using e-commerce to interact with customers.
- Nowadays, online shopping is a fast-growing phenomenon. Growing numbers of consumers shop online to purchase goods and services, gather product information or even browse for enjoyment. Online shopping environments are therefore playing an increasing role in the overall relationship between marketers and their consumers.
- In this presentation we will be looking at the analysis made on the customer retention rate for Indian e-commerce companies.
- We will be analysing the customers retention rate and e-commerce success rate with the help of a survey answered by the customers on online retail companies and the factors that influence their purchase decision.
- This analysis includes the expectations, reliability, trustworthiness etc of the customers on a good e-tailer store.

PROBLEM STATEMENT

- The online purchasing rate increasing day by day. Customers' satisfaction is most important for any business development. The first question that comes into our mind is “What individual factors motivate a buyer to purchase online as well as restrain to purchase online?”.
- Customer satisfaction has emerged as one of the most important factors that guarantee the success of online store; it has been posited as a key stimulant of purchase, repurchase intentions and customer loyalty. A comprehensive review of the literature, theories and models have been carried out to propose the models for customer activation and customer retention. Five major factors that contributed to the success of an e-commerce store have been identified as: service quality, system quality, information quality, trust and net benefit. The research furthermore investigated the factors that influence the online customers repeat purchase intention. The combination of both utilitarian value and hedonistic values are needed to affect the repeat purchase intention (loyalty) positively. The data is collected from the Indian online shoppers. Results indicate the e-retail success factors, which are very much critical for customer satisfaction.

Problem Understanding:

- ❖ The problem statement examined how customers form expectations on technology based self-service quality and suggested five main attributes of ecommerce store quality, that are service quality, system quality, information quality, trust and net benefit.
- ❖ Many businesses focus on customer loyalty programs to remain competitive in today's marketplaces and explore innovative ways to keep their existing customers engaged. Customer retention is a simple concept. Yet, it often requires effort from every department to improve the customer experience and build lasting trust. So, what is customer retention and why it is so important. Let's know about it by analysing the problem.

What is Customer Retention?

The customer retention is the process of engaging existing customers to continue buying products or services from their business. The goal of customer retention is retaining as many as customer as possible in the company.

Why is Customer Retention Important?

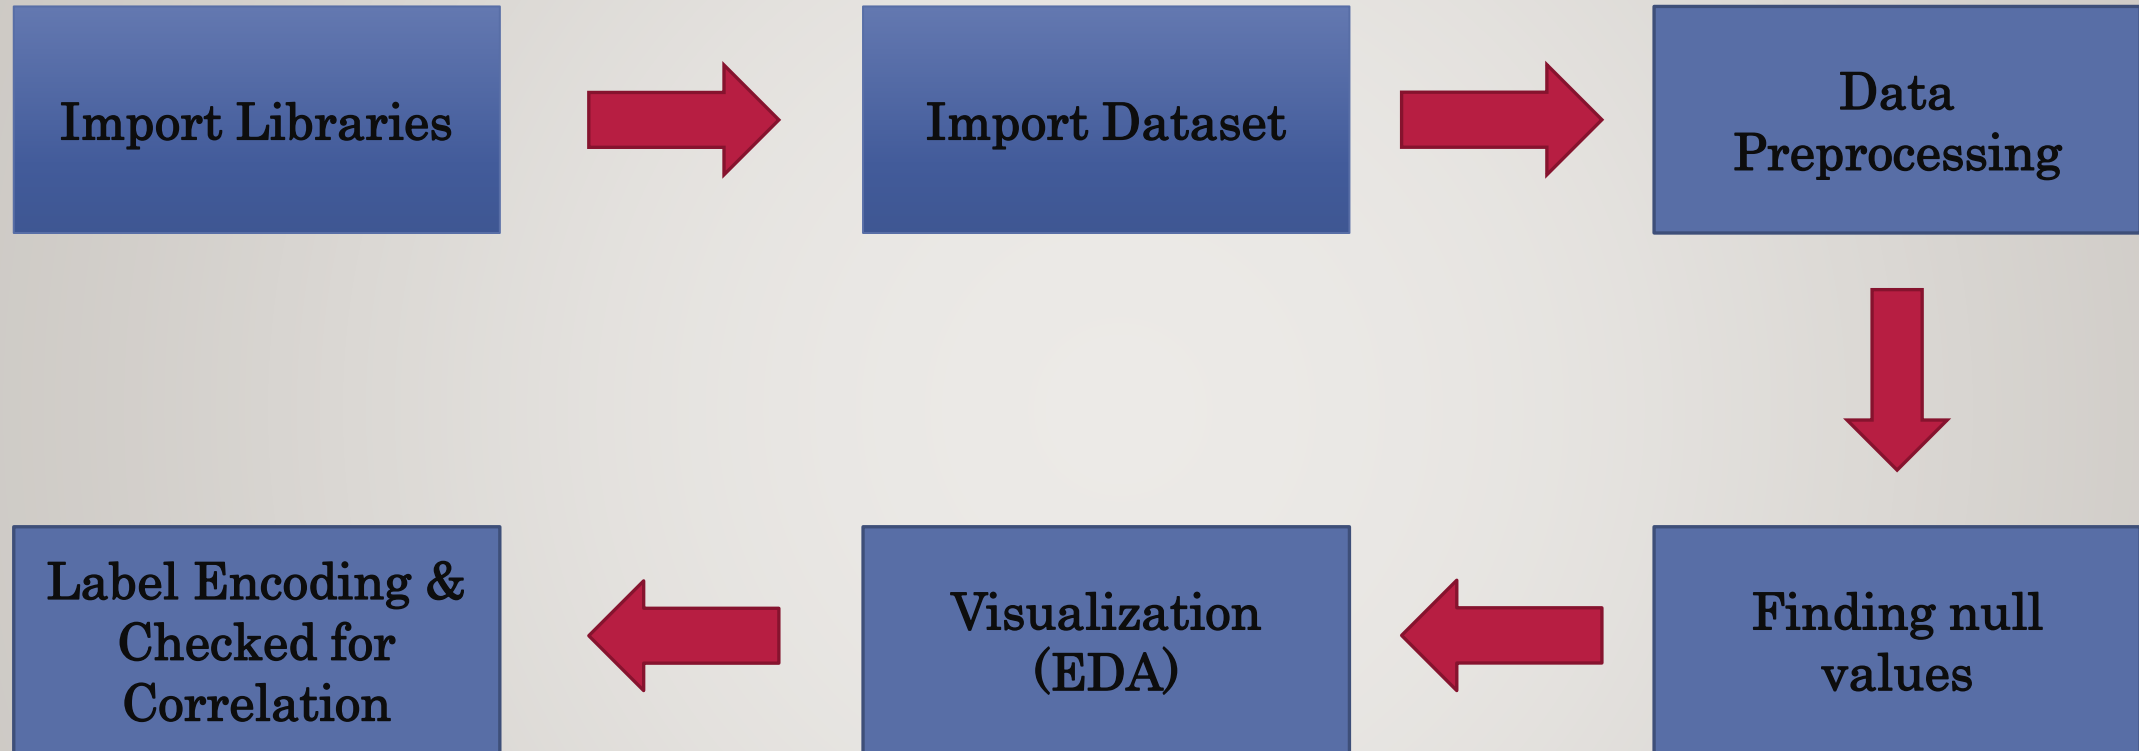

- Customer retention is an express route to a business' financial success. It allows the companies to build long term, meaningful relationships with customers.
- It empowers customers to share feedback with the company team.
- It helps you understand how loyal and satisfied your customers are, how strong your customer service is, and your products are really worth their money or not.
- It enhances the brand reputation and understands future needs of the customers.

Benefits of Customer Retention:

- ✓ Retention is more cost effective than acquisition.
- ✓ Loyal customers provide excellent word of mouth referrals.
- ✓ Return customers are more profitable.
- ✓ Regular customers provide more feedback.
- ✓ Your brand will stand out from the crowd.
- ✓ Customers will explore your brand.

Data Analysis Steps Done:

Exploratory Data Analysis (EDA) Steps:

- I have imported the dataset which was in excel format.
- Performed some of the statistical analysis like dimension of the dataset, data types, info, number of unique values, value counts etc.
- The column names in the dataset were not in the proper format so, I have renamed them for better understanding. And the columns after renaming them is as below.

```
# Checking the new column names after renaming them  
df.columns
```

```
Index(['Gender', 'Age', 'Shopping_City', 'Pincode', 'Shopping_Since',  
      'Shopping_Frequency', 'Internet_Accessibility', 'Device_Used',  
      'Screen_Size', 'OS', 'Browser_Used', 'Channel_First_Used', 'Login_Mode',  
      'Time_Explored', 'Payment_Mode', 'Abandon_Frequency', 'Abandon_Reason',  
      'Content_Readability', 'Similar_Product_Info', 'Seller_Product_Info',  
      'Product_Info_Clarity', 'Navigation_Ease', 'Loading_Processing_Speed',  
      'User_Friendly_Interface', 'Convenient_Payment_Mode',  
      'Timely_Fulfilment_Trust', 'Customer_Support_Response',  
      'Customer_Privacy_Guarantee', 'Various_Channel_Responses', 'Benefits',  
      'Enjoy', 'Convenience', 'Return_Replacement_Policy',  
      'Loyalty_Programs_Access', 'Info_Satisfaction',  
      'Site_Quality_Satisfaction', 'Net_Benefit_Satisfaction', 'Trust',  
      'Product_Several_Category', 'Relevant_Product_Info', 'Monetary_Savings',  
      'Patronizing_Convenience', 'Adventure_Sense', 'Social_Status',  
      'Gratification', 'Role_Fulfilment', 'Money_Worthy', 'Shopped_From',  
      'Easy_Web_App', 'Visually_Appealing_WebApp', 'Product_Variety',  
      'Complete_Product_Info', 'Fast_WebApp', 'Reliable_WebApp',  
      'Quick_Purchase', 'Payment_Options_Availability', 'Fast_Delivery',  
      'Customer_Privacy_Info', 'Financial_Security_Info',  
      'Perceived_Trustworthiness', 'Multichannel_Assistance',  
      'Long_Login_Time', 'Long_Display_Time', 'Late_Price_Declare',  
      'Long>Loading_Time', 'Limited_Payment_Mode', 'Late_Delivery',  
      'WebApp_Design_Change', 'Page_Disruption', 'WebApp_Efficiency',  
      'Recommendation'],  
      dtype='object')
```

Exploratory Data Analysis (EDA) Steps:

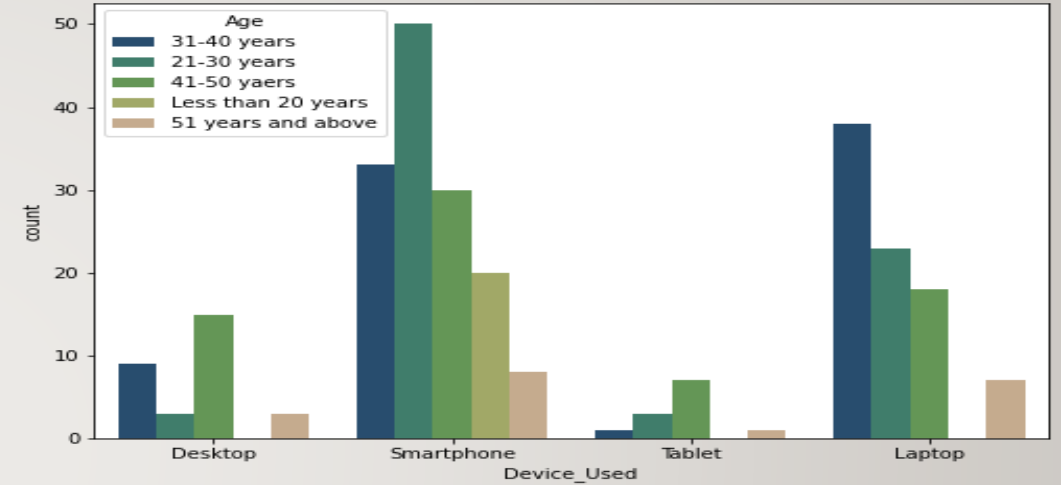

- While looking into the value count function I found some duplicate entries in the columns, so I have replaced them.
- Checked the null values and found no null values in the dataset.
- Performed both univariate and bivariate analysis and visualized each feature using seaborn and matplotlib libraries by plotting count plot, pie plot, distribution plot, box plot and factor plot.
- In this presentation I am using only bivariate analysis plots for visualization.

VISUALIZATIONS

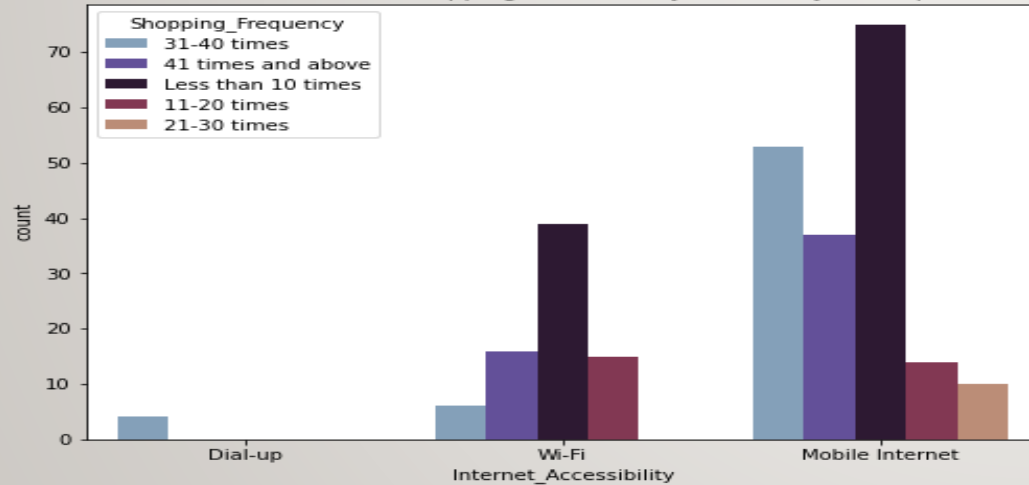

Checking how long the customers shopping online on the basis of Gender

Checking which device used to access shopping online on the basis of Age

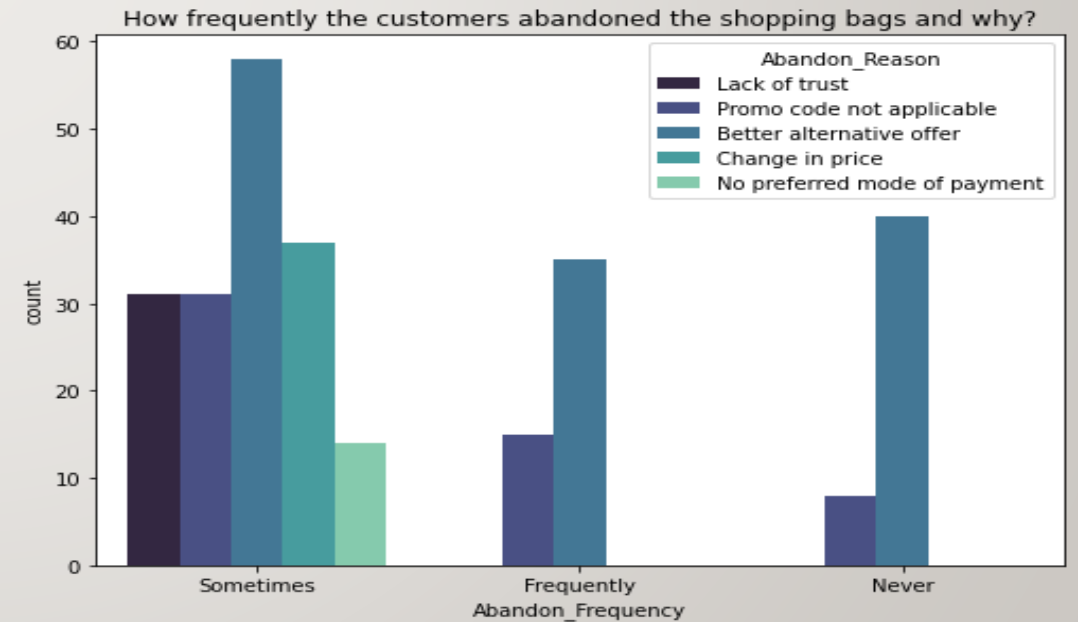

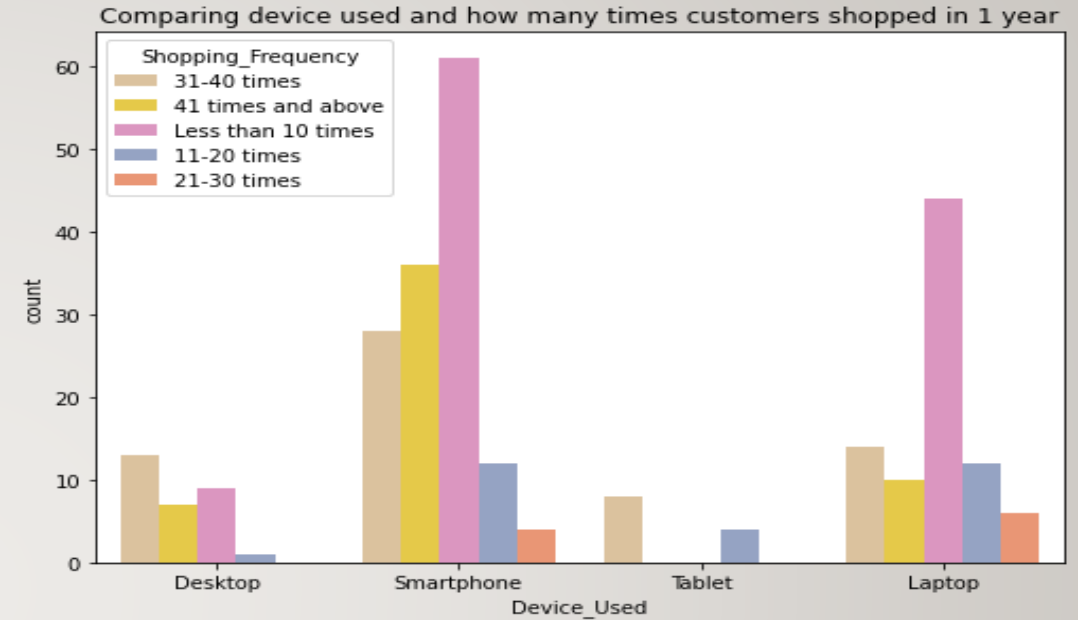

How the customers access online shopping & how many times they made purchase in 1 year In 1 year how many times customers made shopping & which city they shopped more

Observations from the above graphs:

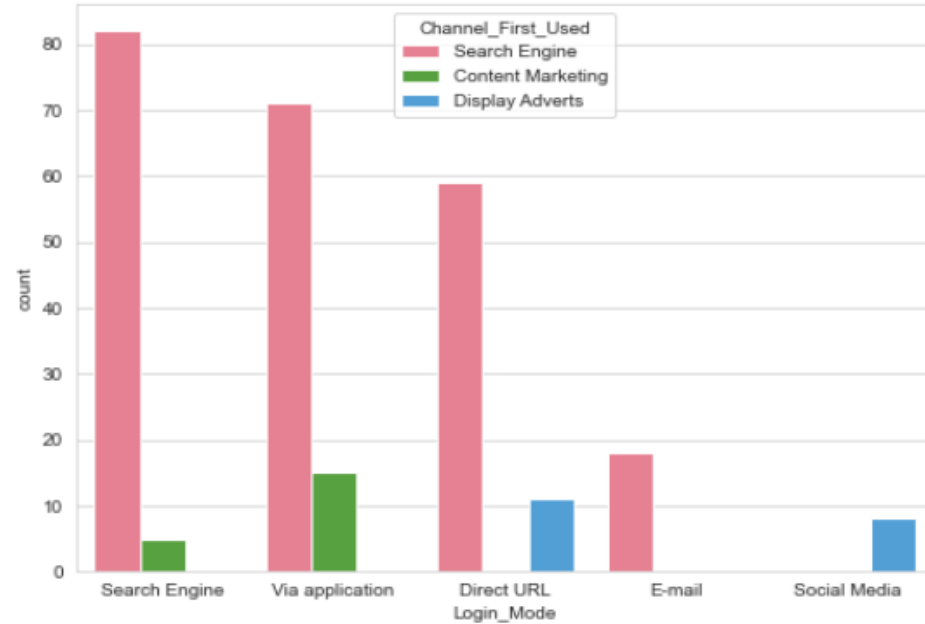

- ✓ Most of the female customers shopped online from more than 4 years and the count is also high for the females who shopped from 2-3 years. And only few male customers shop online more than 4 years. Which means the female customers are more enthusiastic to buy products from the online shopping websites.
- ✓ Many customers whose age between 31-40 years and 21-30 years used Smartphones followed by Laptops to access the online shopping websites.
- ✓ Most of the customers access the shopping websites more than 31-40 times in 1 year through Mobile Internet to shop the products also most of the customers who used mobile internet to access the online shopping website made online purchase less than 10 times in a year. And only few of the customers used WIFI network to access the shopping store.
- ✓ Most of the customers used ecommerce websites less than 10 times in a year from the city Delhi to shop the products.

Observations from the above graphs:

- ✓ The customers having their mobile screen size say 6 inches(others) have followed search engine channel to arrive at their favorite online store for the first time. Also the customers who have their screen size 5.5 inches also used search engine channel to access the online shopping store.
- ✓ Most of the customers used Smartphones 31-40 times in an year to access the ecommerce websites to shop the products.
- ✓ Many customers having windows operating system in their device ran Google chrome to access the ecommerce shopping websites and some of the customers having IOS/Mac operating system used Google chrome as well as Safari to reach the online shopping store.
- ✓ Due to Lack of trust on the ecommerce websites, sometimes most of the customers abandoned the websites and some of the customers abandoned the shopping website due to the promo code not applicable. which means, if the product is having the special price or some catalogue price rule is applicable on it. Then coupon code should not be applicable on the products.
- ✓ So it is important for the ecommerce companies to create discount price, offers, coupon codes to retain the customers.

How and which channel used to arrive at the online store for 1st time

Comparing Time_Explored and Content_Readability of the customers

Which payment mode and browser used to pay bill

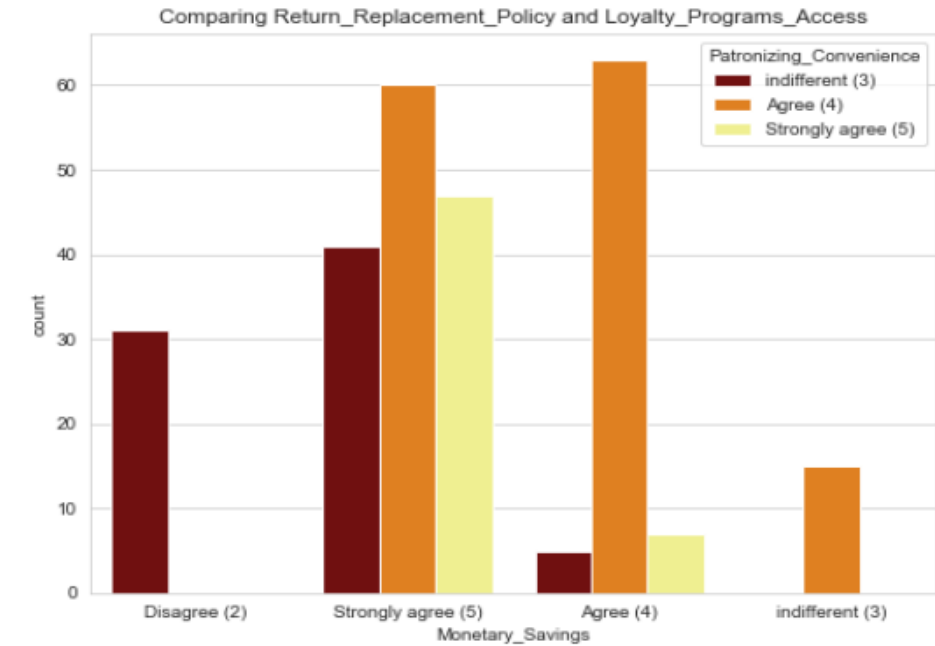

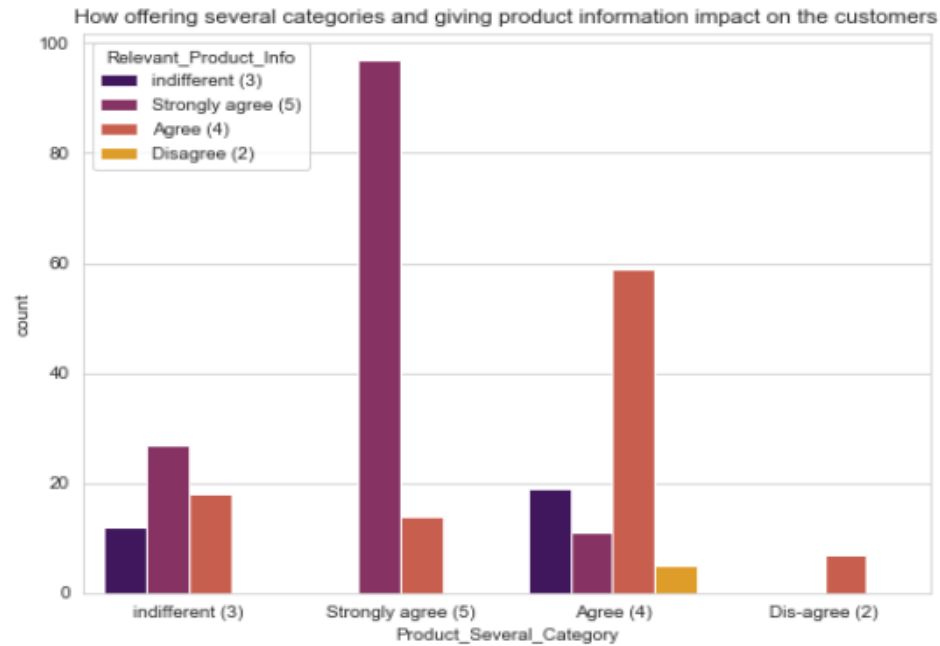

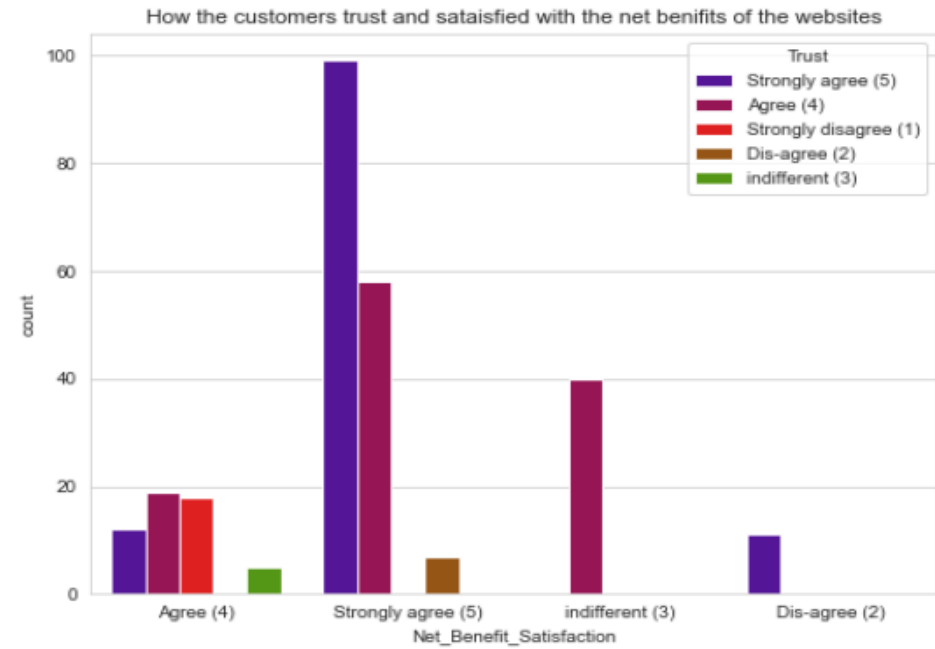

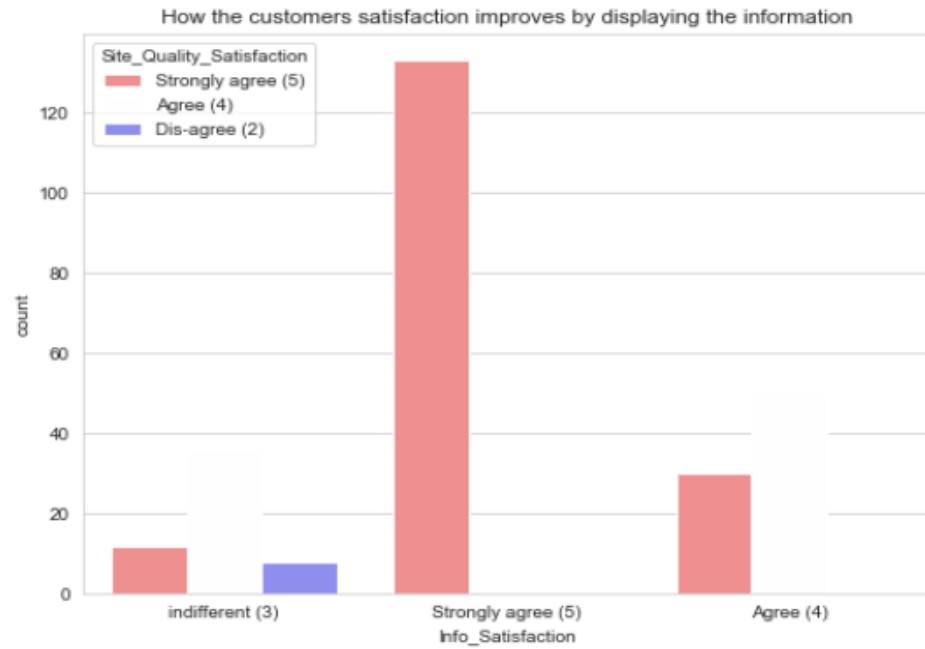

How frequently the customers abandoned the shopping bags while paying the bill?

Observations from the above graphs:

- ✓ Search engine is the most used channel by the customers to arrive their favourite store for the first time and after visit the website for the first time, most of them used the same channel to reach the online retail store to reshopping the products.
- ✓ Most of the customers agreed that the content on the website is easy to read and understand also they explored more than 15 mins before making the purchase decision and some of the customers strongly disagreed that the content is not good and they explored 6-10 mins before making the purchase decision. So ecommerce websites should enable some images and it should contain clear structure, so that the customers can easily read and understand the content of the product.
- ✓ Most of the customers used google chrome to reach the websites and they preferred to pay their product price using Credit/Debit cards and only few of the customers used Safari browser to reach the e-retail websites.
- ✓ Sometimes the customers used to abandon their selected items and wants to leave without making payment and most of them making the payment using E-wallets methods.

Observations from the above plots:

- ✓ Many customers agreed that displaying quality information on the website improves satisfaction of customers since they believe that displaying quality information have significant association with customer satisfaction and they are satisfied and happy while shopping on good quality websites. In order to obtain high levels of customer satisfaction, high service quality is needed, which often leads to favorable behavioral intentions also a website with good system quality, information quality, and electronic service quality is a key to success in e-commerce. So, the online e-tailers must display all the information about the product then only customers get an idea to buy the products regularly.
- ✓ Most of the customers agreed that net Benefit derived from shopping online can lead to users' satisfaction also they believe that user satisfaction cannot exist without trust. The e-tailer should provide crediting points (net benefits) so that the customers tend to buy frequently in order to gain points. Trust is also a major factor for customers to decide whether to buy products from online stores or not also trust helps reduce uncertainty when the degree of familiarity between the customer and transaction security mechanism is insufficient. If customers have a high level of trust toward the website, it is more likely for them to have intention to purchase so it's important for the ecommerce website to make the customers get trust on them.

- ✓ The customers are more likely to purchase on the same websites if that website offers them a wide variety of products in several category and giving relevant information about the products. Having multiple product lines may allow to grow the ecommerce business and finding accurate and up-to-date information of the product must be stated clearly in the website so that the customers can buy the products without any confusion.
- ✓ In this digital and competitive world, everyone wants to save money, the ecommerce company need to know that the best way to sell online is to make the consumer feel that he is saving money doing so. And not just feel, online shopping should result in a lot of saving for the consumer. This saving would automatically get converted into trust and brand equity for the seller. To do this the online companies should offer the best deals and bargains to the consumer through social platforms. If the retailers give some discounted prices then the customers can make money savings and they tend to purchase in the same websites regularly. Convenience is the important thing for ecommerce and most of the customers agreed with it.

- ✓ Most of the customers agreed that shopping on the website gives the sense of adventure. The adventures in the shopping websites gives positive activity to experience an amplified enjoyment to the customers while shopping on websites. They also believe that shopping on preferred e-tailer enhances the social status of the customers. Many customers think they are adventuring while shopping online as they search for low cost and high discount products to buy and prefer the same to the others. In this way they think that shopping in the website gives them the adventure.
- ✓ Shopping online won't affect anyone's status and the customers agreed that shopping on preferred e-tailer enhances their social status.

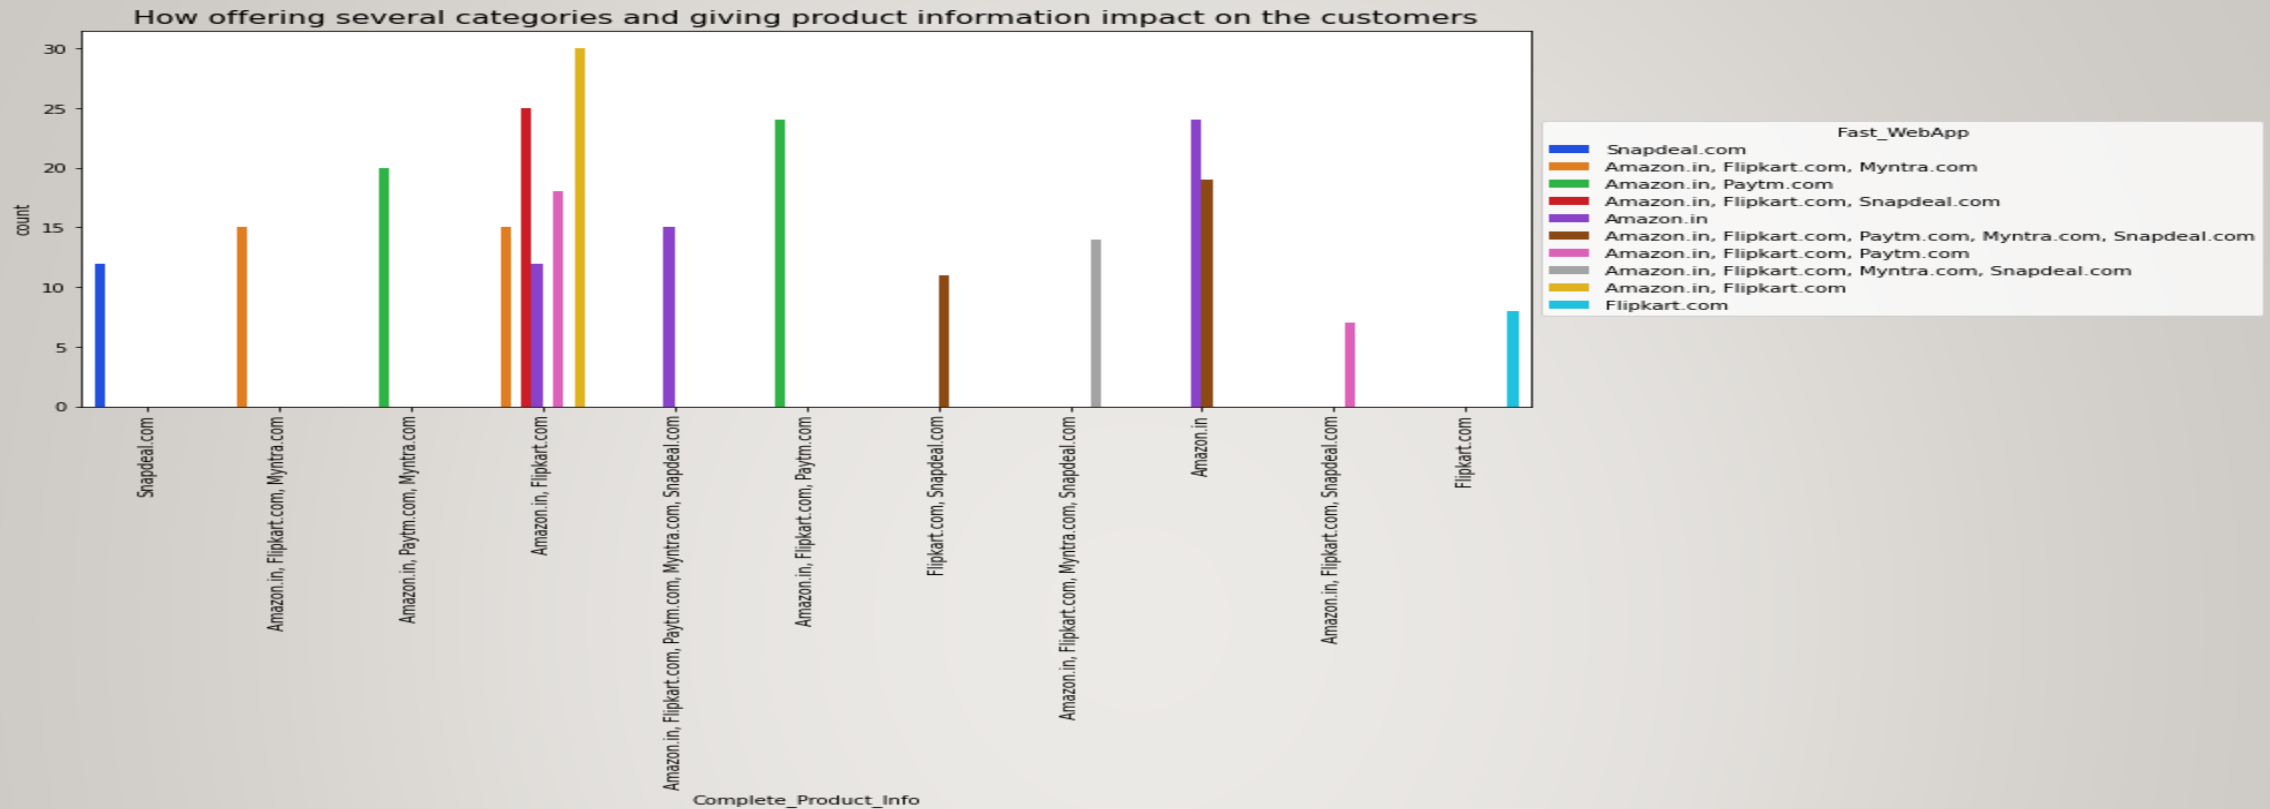

- ✓ Most of the customers agreed that they felt gratified while shopping on their favorite e-tailer. This is because the e-tailer companies can successfully make up for a mistake or a dissatisfied customer is to be equally expedient in addressing the customer's needs.
- ✓ Also, most of the customers agreed that shopping on online website helps them fulfil their certain roles. Fulfilment refers to activities that ensure customers receive what they ordered, including the time of delivery, order accuracy, and delivery condition, also the customers cannot see the product directly before they purchase it. Companies must ensure delivery timeliness, order accuracy, and delivery conditions to provide superior service quality for customers. The companies must understand that the customer satisfaction is an indication of the customer's belief of the probability of a service leading to a positive feeling. If the companies give positive vibration to the customers by giving chance to fulfil their roles then they shop more on that particular website.

- ✓ The customers should satisfy with their product that they shopped from the online store then only they agreed that they got value for the money they spent. The companies should display the quality information about the products so that the customers being able to purchase their product and thinks that it worth for money and this comes under utilitarian value.

Observations from the above plots:

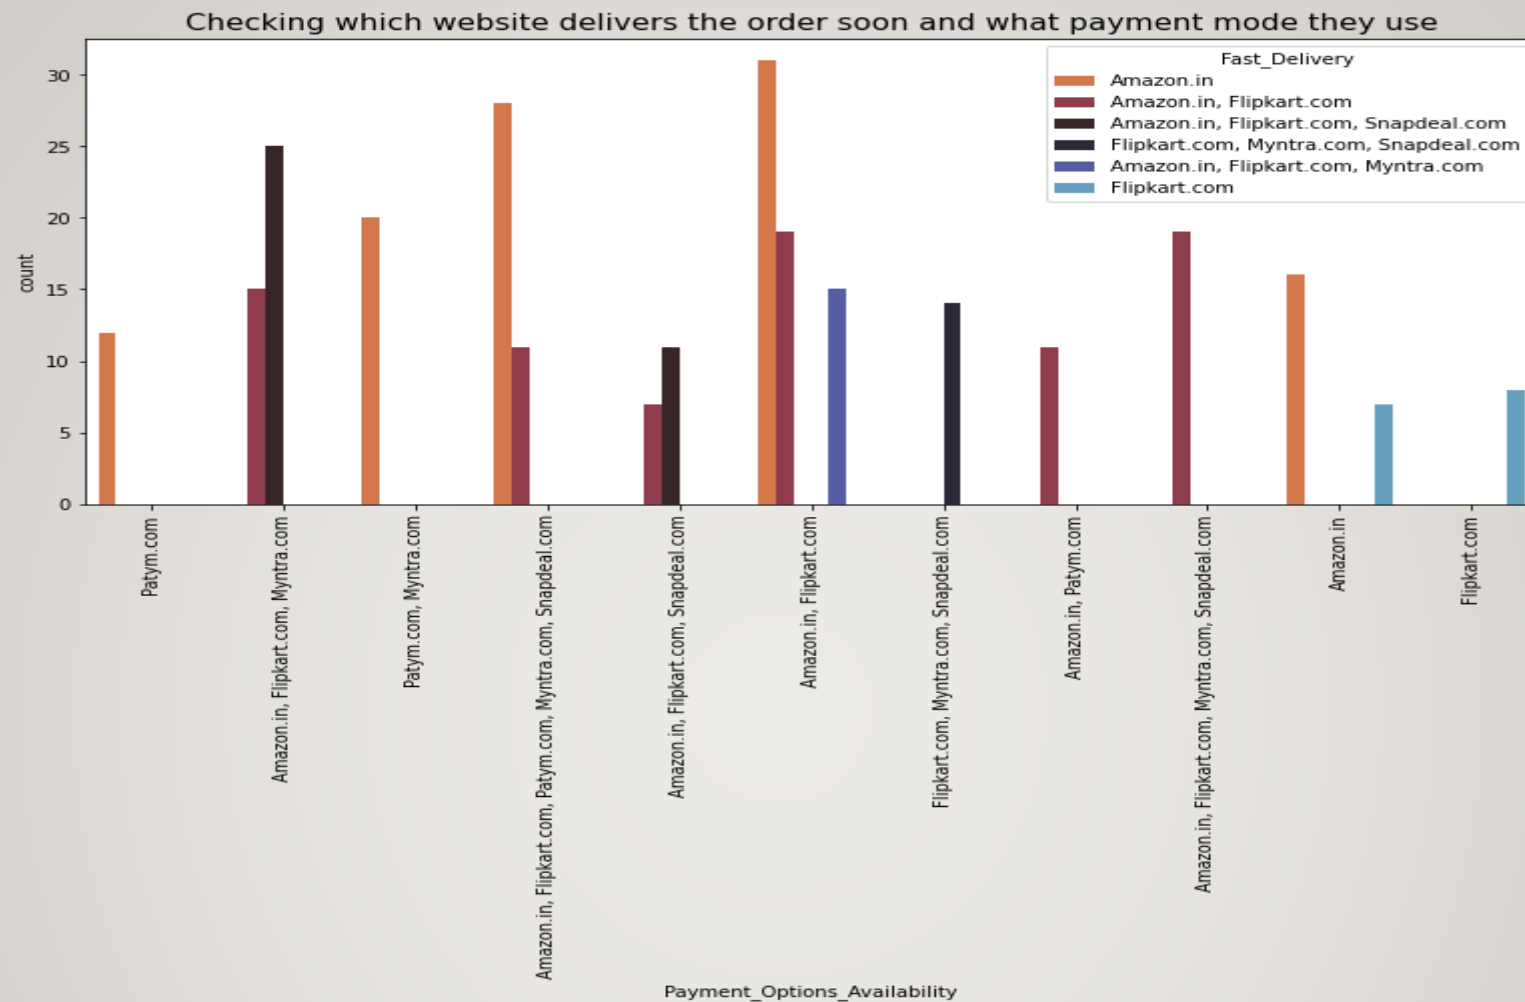

- ✓ There are many websites for selling the products among them Amazon.in, Flipkart.com, Paytm.com, Myntra.com, Snapdeal.com are easy to use and shop. Most of the customers used these websites more, this is because, these websites may provide less price products, good discounts and may have lots of varieties of similar products with different brand.
- ✓ Amazon and Flipkart have high visual appealing web-page layout compared to others that means these websites provides some colorful graphics on the homepage. The more people find the website attractive, there are higher chances that they will stay a little longer in that website, also these websites provide wild variety of products in an attractive manner which makes the customers to buy the product.

- ✓ The most common problem which is faced by the customers is server problem, in many websites these problems are common. Also, only few websites provide the relevant information about the products. These things may lead the customers to have bad impression on these websites.
- ✓ From the plot we can visualize that the amazon and flip kart websites gives complete and relevant information and these websites have no issue with the server and most of the customer liked the web speed of both amazon and flip kart.

- ✓ The consumer determines the shop's reliability based on the information transmitted by the shop and certain sites offer customers the opportunity to purchase items that are used which means they are likely to be the most reliable. Some of the customers complete their purchase very quickly due to the discount, less price, free delivery charges etc. provided by the ecommerce websites.
- ✓ From the plot we can notice amazon site is more reliable and most of the customers complete their purchase on amazon very quickly.

- ✓ Having different types of payment methods will help the customers to pay the invoice easily using their choice of payment and if the websites have speedy delivery methods without delivery charge, then the customers like to buy the products in those websites.
- ✓ Here Amazon and Flipkart have several payment options and Amazon indeed has speedy order delivery compared to other websites.

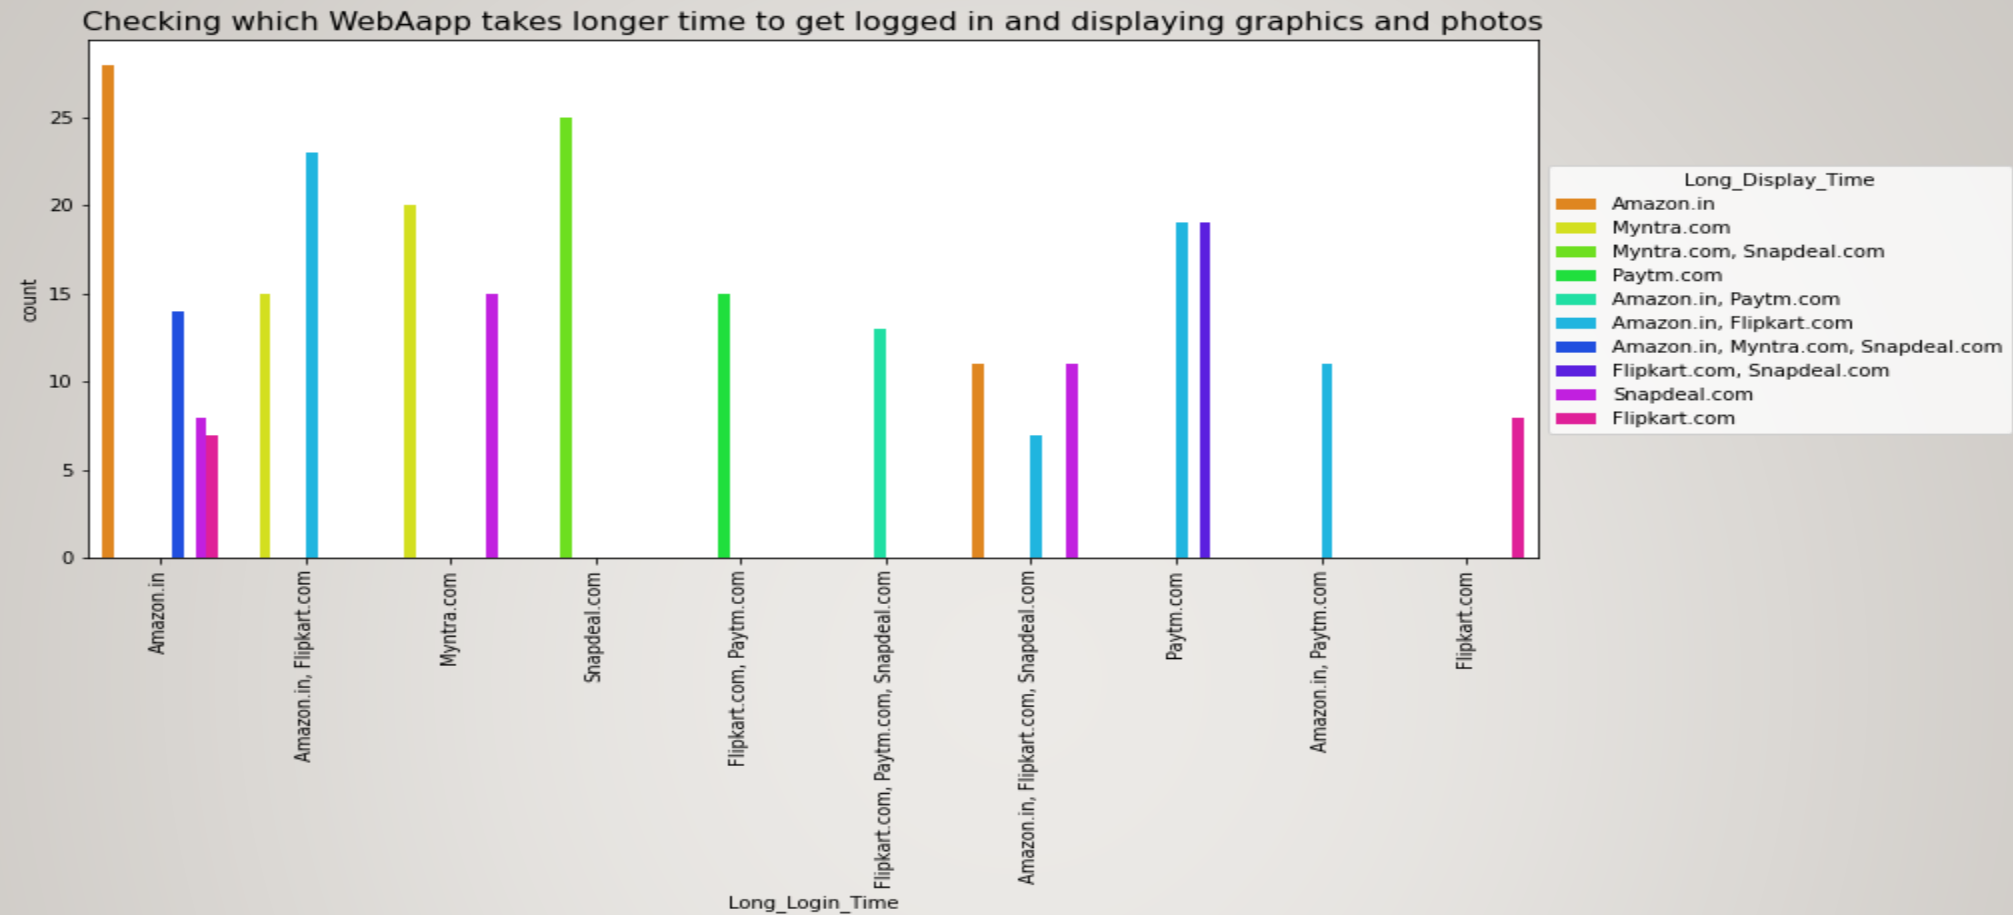

- ✓ Security/privacy refers to the security of credit card payments and privacy of shared information like name of the customer, address and phone number. Customers are always concerned whether the website would protect them against fraud after a transaction. So, website security and privacy are important to assess the service quality of online stores. The customers think that buying online means taking risk, in this case trust is more important thing for both merchant and customer.
- ✓ Most of the customers trusts amazon followed by flip kart in terms of keeping their privacy of data information secured and the customers who believes that amazon website keeps their financial information as secrete also trusts flip kart, Myntra, Snapdeal and Paytm in terms of keeping their financial information secured. Most of the customers believed that Amazon has perceived trustworthiness compared to others. Apart from this, customers believed that flip kart and Myntra also have perceived trustworthiness.

Checking which WebAapp keeps the financial info of consumers and presence of online assistance through multi-channel

- ✓ The customers trusts that amazon and flip kart keeps their financial information private and they never share any type of information to others.
- ✓ Multi-channel retailing provides several benefits which includes several shoppers like the convenience that is provided through online channels in comparison to physical stores. Most of the customers like Amazon in terms of presence of online assistance through multi-channel.

- ✓ The customers mostly choose amazon website for buying products as it gives promotions and sales periods in some days, on these days most of the customers attracted by the offers provided by the websites, wants to buy the products. So, amazon will take more time to allow the customers to get login into the site.
- ✓ When there is promotion or sales period, amazon and Myntra takes longer time to display the graphics and photos.

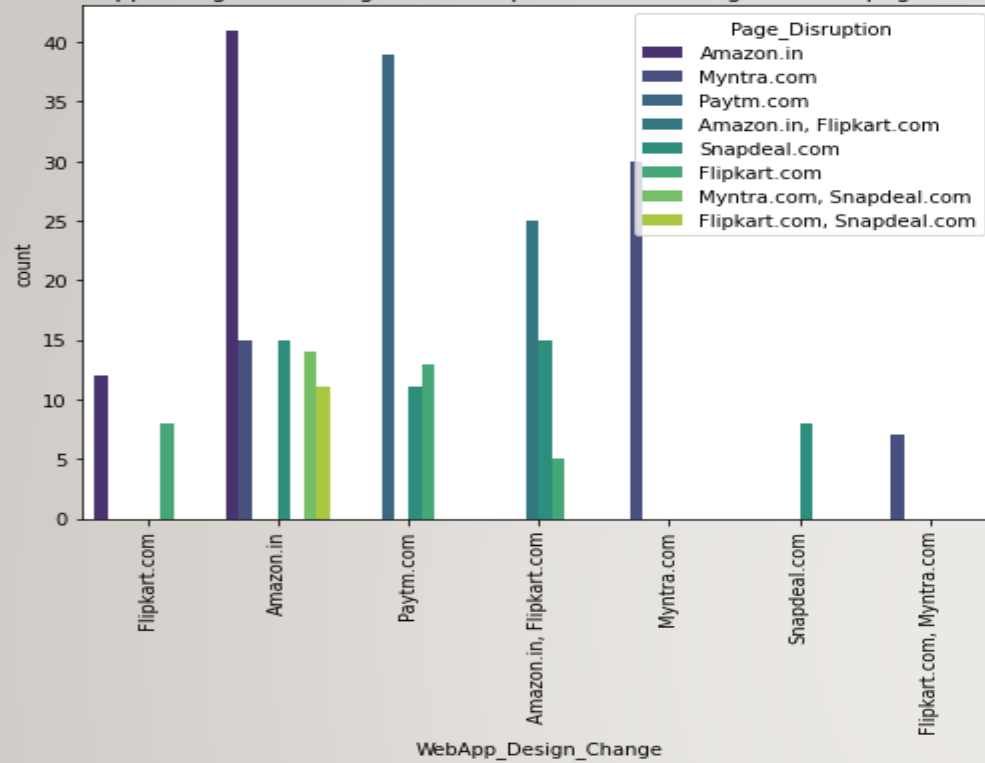

- ✓ When there is promotion and sales, Myntra takes time to load the page and it has late declaration of price in these days.
- ✓ Myntra declares the late price in order to clear the sales and they fix the price by comparing with other websites and they end up sales by providing benefits to the customers. In this time most of the customers try to shop in this website so it takes long loading time.

- ✓ Snapdeal has limited mode of payment on most of the products followed by Amazon. And Paytm takes more time to deliver the product. So this website may not satisfy the customers due to late delivery.

Which app changes the design and disruption when moving from one page to another

Which app is efficient and which Indian online retailer would I recommend to a friend

- ✓ Amazon is the website where they frequently change their application designs in order to attract the customers and satisfies the customers' needs and they tend to make customers by updating everyday as per the trend. But the disadvantages of this website are when moving from one page to other it slows down and sometimes it may shutdown.
- ✓ Amazon is the website which is more efficient as before and I suggest Amazon.com and Flipkart as a best Indian online retailer store for purchasing all types of products, as they provide enormous amounts of benefits.

ASSUMPTIONS

Based upon the analysis, the following assumptions (recommendations to the online seller) are presented for the online sellers to make online shopping more popular, convenient, reliable and trustworthy.

- Transaction security and consumers data safety are principal concerns of online customers purchasing products or services online. Therefore, online vendors can assure their consumers' by offering personal information privacy, protection policy and guarantee for transaction security by improving their technological systems.
- Retailers should be careful about the annoying factors of online shopping such as being unable to access the website, long delays in completing online orders, inconsistencies in the items available online, mistakes in filling orders, and the hassle of returning goods.

- Online sellers can be more concerned about delivery times, delivery charge and product return policies. They can make it easier, quicker and reliable, so that consumers can enjoy the online shopping experience and they like to shop in the particular websites regularly.
- The respondents thought that products' mixing up and finding different products at delivery time which is the main inhibition of online shopping, so that the sellers must be very cautious when it comes to delivery.
- Getting feedbacks from the customers is also one of the important things to improve the sales of the company. The e-retailer wants to keep the customer happy in order to build the successful business, but they easily fall into a trap of assuming that the customers will give feedback without being prompted. If the e-retailers are doing something wrong, most of the customers won't complain, they will just go elsewhere. So, it is important to ask customers how they really feel about their services.

CONCLUSION

- The endeavour of this study is to identify the motivating factors towards online shopping and in which e-retailer the customers likely to shop more. In this project we have investigated ecommerce quality in online businesses and develop new knowledge to understand the most important dimensions of E-retail factor for customer activation and retention.
- From the analysis it was found that consumers purchasing decisions were dependent on various factors. All these motives motivate consumers to purchase products through online. According to consumers' opinions, "time saving" is the most important motivating factor for online shopping.
- After visualizing the data, I found Amazon is the best online store where the customers trust on buying products and it has positive impact on the customers. Also, amazon and flip kart have increased customers' expectations. So, they are the best online retailer who makes the loyal customers and satisfies the customers.
- It was also observed that online shopping is not trustworthy and reliable to some consumers due to only online payment system and personal privacy. In addition, online security is a major concern for the consumer particularly in terms of fraud, privacy and hacking. So, the organizers should make up their organization for better sales.
- Customer satisfaction and customer trust appeared as the outcomes of overall e-retail factor. The results of the analysis showed that e-retail factor had a positive impact on customer satisfaction

A hand in a dark suit sleeve holds a glowing, translucent sphere. Inside the sphere, the words "THANK YOU" are written in a bold, white, sans-serif font. The sphere is surrounded by bright blue, crackling energy lines that radiate outwards. The background is a dark blue field filled with a complex, web-like pattern of glowing blue lines, suggesting a digital or network environment.

**THANK
YOU**
